

Dream Job

Part 1:

1. What was your dream job when you were at a young age?

Well, when I was younger, I dreamed of being a travel or food blogger, as I have always had a passion for cooking and travelling. I always desired a job that would not require me to work in a single location because I did not want a monotonous work life. Therefore, I desired to become an international travel or cuisine blogger.

2. Have you ever changed your mind about your dream job?

Yes, as I've grown, I've realised that I'm better suited for a career as an engineer in the computer industry than as a travel blogger, based on my talents and understanding of Computer Science courses. I changed my mind because my parents did not want me to enter that field.

3. What are your plans to do in the future?

As I have a significant interest in the technological field, I hope to continue working as an engineer in the future. I've been learning computer programmes and programming languages for more than four years, and I'm now fairly confident and at ease with it.

4. What kinds of jobs are highly popular in India?

Well, several occupations are popular in my nation, but I feel that the majority of parents want their children to become physicians, engineers, police officers, athletes, teachers, performers, or models.

5. Do you have a job right at present?

Yes, I am currently employed as a content writer for a reputed company. As an intern, I am responsible for creating content optimised for search engines that can be published on the company's website.

6. Have you had a full-time or part-time job earlier?

This was my first full-time position, one I want to maintain. Due to my studies, I had a part-time job repairing software and hardware problems on computers and mobile phones.

7. What is your job?

Currently, I am employed as a content writer, where I am responsible for producing SEO-compliant articles for website publication. The material may consist of study-related instructions or exercises.

Part 2:

Describe a perfect job

Introduction

In this day and age, it is difficult to get a perfect job. It takes a lot of effort and experience to have a perfect job.

What it is?

I have always dreamed of entering an R and D institute. Research helps to gain a lot of experience and to carry out new discoveries to bring the science stream forward.

How you knew it?

Few years back while I was an undergraduate student I got to know about the research field for the first time and from that point I became interested in performing tests and forming new compounds by researching on the structure and functions of a specimen.

What it is like?

In the research and development field, you need to perform various tests and combinations of drugs to form a medicine. In addition to this, recombination of DNA is carried out to learn about DNA sequencing and its changes that causes mutations and to solve these problems DNA sequencing is changed and other related tests are performed.

And explain why you think it is perfect?

It is a perfect job in my perception because the world needs the medications for diseases that are incurable and to try new formulations for the development of the science stream.

Conclusion

To be honest, it will be a great experience and it is the perfect job to me as it helps to learn new things. To form an expertise under the hands of well trained experts.

Part 3:

1. What kind of jobs do young people prefer?

Answer: Young people prefer jobs that allow them the freedom to work from anywhere. Nowadays people like to work from home or in a place where they are comfortable. They also look for jobs that give them a good learning experience and also financial growth. Most of the young people in the world are highly educated and are looking for high-paying white-collar jobs.

2. Some people will lose their jobs because of technology, how to deal with it?

Due to the advancements in technology and science, many jobs have been automated using machines and computers. Many machines have reduced the need for human labour and have improved efficiency and speed. I feel in the future artificial intelligence will take up more jobs that people are doing now.

3. Will you settle down in another country?

Answer: In my opinion, I should stay in my country and work for my country instead of settling in a different country. I have seen many people who wish to work in a different country because they provide a good salary and a better standard of living. But I want to spend my life working for my country.

4. How do young people today decide on their careers?

Answer: Nowadays people look at their career very seriously. They do research on the various options they have based on their qualifications and then decide if it suits their interests and then choose to do that job. Now many youngsters are choosing their careers based mostly on their passion.
